**SAVE YOUR MONEY
LEAVE THE HOPPER EMPTY UNTIL SETUP IS DONE**

**WANT THE FASTEST SETUP?
FOLLOW THIS GUIDE FROM START TO FINISH**

Installation – Tractors with ISO Socket

- Install the master switch in the tractor cab
- Connect the harness to the ISO socket
- The ISO socket is used for power only, it is not connected to the tractor CANBUS

Installation – Tractors without ISO Socket

- Install the master switch in the tractor cab
- Connect the power harness to 12volts and ground
- If possible use a switched power source (power is off when the tractor key is off)
- Connect to power located after the battery isolator (prevent the tractor battery going flat)
- Power source should be capable of supplying 20amps
- If connecting direct to the battery, unplug the spreader cable when not using the spreader

Power On

- The i4M controller takes 60 seconds to boot up
- There is a diagnostic LED on the box

LED is off
No power

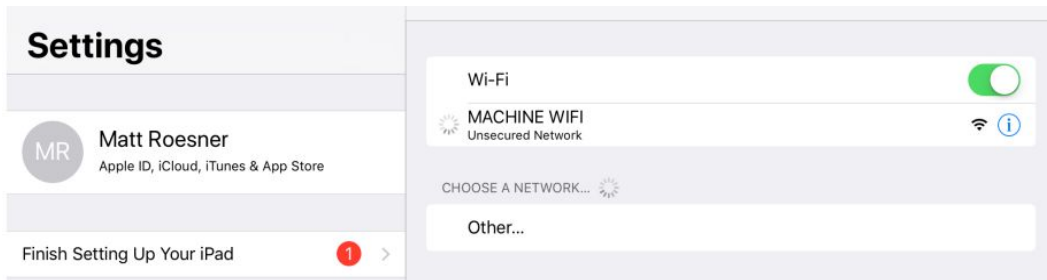

LED is red
Starting up
Please wait

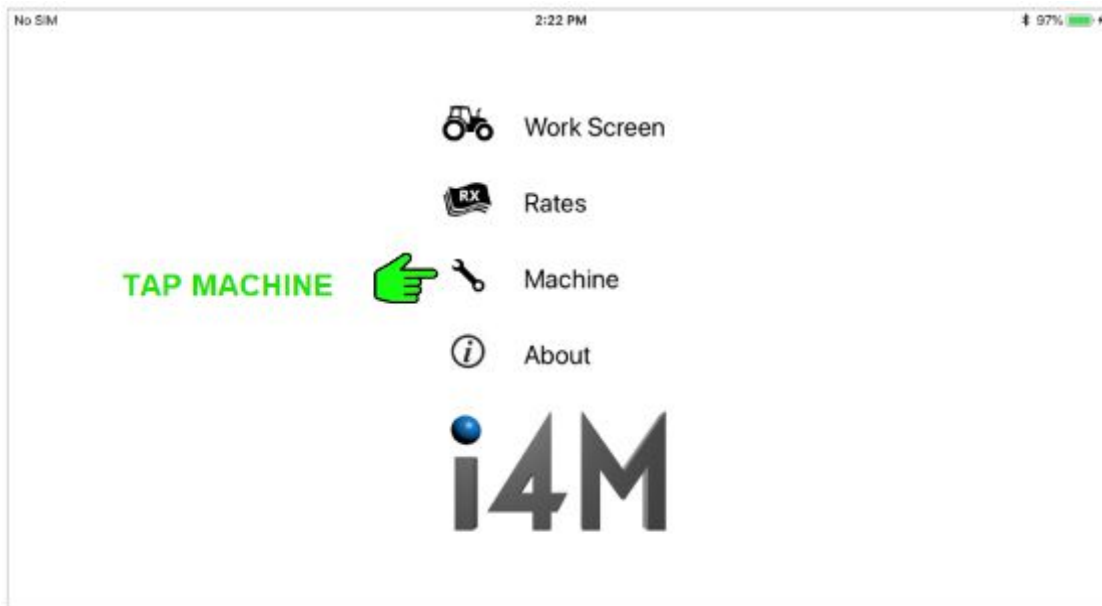

LED is green
Controller is running
Wifi is available

iPad App

- Install the [i4M Spreader](#) app on your iPad
- After the app is installed, connect the iPad to the controller
- Open the wifi settings and connect to MACHINE WIFI

- Open the i4M Spreader app

Machine Settings

<input type="text" value="0.231"/>	Diameter of the belt drive roller in metres	800 Series = 0.181 900 Series = 0.231 916T = 0.281
<input type="text" value="0.730"/>	Width of the door opening in metres	All Models = 0.730
<input type="text" value="560"/>	Belt sensor, pulses for one revolution of the drive roller	Factory hydraulics = 560 Ground drive conversion = 784
<input type="text" value="605.0"/>	Distance cal, adjust so this matches your tractor speed: 0 km/h	Drive the machine and adjust this until the km/h matches your tractor speed
<input type="text" value="CHANGE"/>	Door actuator is installed	Change if required

Auto Door Control - Door Actuator

- Electrical actuator that automatically sets the height of the door
- Optional equipment, it may not be installed
- The actuator contains a position sensor that requires calibration

Door Info

Item	Value	Unit	Description
Flags	?	Hex	Flags variable from main control processor
Open	?	Status	Actuator retract command
Close	?	Status	Actuator extend command
Target Height	?	mm	Desired door height or opening
Actual Height	?	mm	Actual door height or opening
Door Sensor	?	mV	Door position sensor voltage reading
Sensor Min	?	mV	Position sensor min reading
Sensor Max	?	mV	Position sensor max reading

Door Control

Follow these steps
Reset Actuator will calibrate
the position sensor

Reset Actuator

- 1 Check the door is not jammed or blocked
- 2 Tractor running
- 3 Tap OPEN, wait for it to stop
- 4 Tap CLOSE, wait for it to stop
- 5 Tap SET, door should move to the correct spreading height

Current Product

Urea

Name

Edit the name if you want
Enter the width
Enter your desired door height

24

Spread width m

25

Door height mm

Changing the Spread Width

- After the product is calibrated, you can change the Spread Width anytime, you don't need to calibrate again

Changing the Door Height

- After the product is calibrated, you can change the Door Height anytime, you don't need to calibrate again

Hopper Kilograms – Machines with Loadcells

- Electrical weigh scales to show the amount of product in the hopper
- Optional equipment, they may not be installed
- Loadcells do not work until they are calibrated

Loadcell Quick Zero

Calibrate Loadcells

Calibrate the loadcells
Follow both these steps

Loadcell Settings

Use Weight Tracking or Moving Average filter

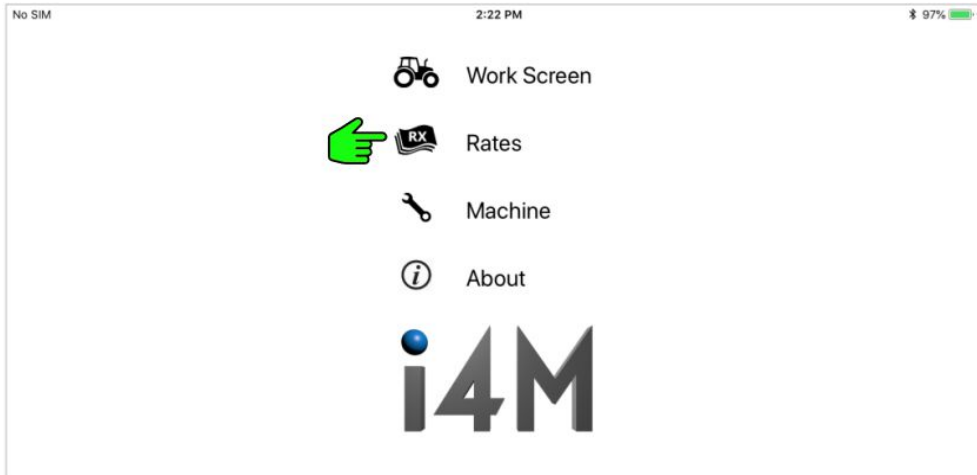

Machines with 3 loadcells – turn on the first 3 channels

Machines with 4 loadcells – turn on all 4 channels

Turn off unused channels

Operating the Spreader

- When first using the spreader, do not fill the hopper (save your money, test it empty)
- Go to the app Main Menu

- Home
- User
- Download

Select a Map or Fixed Rate Below

Fixed Rate kg/ha

- Home
- User
- Download
- Zero ha

A blue rectangular screen with three input fields. The first field contains '1000', the second '1500', and the third '2000'. A green hand icon is pointing to the first field.

Enter a Rate (in kg/ha)

You can enter more rates if you want to change them on the run

	Home	
	Spreading	Tap to turn Spreading ON/OFF Or press the Master Switch WARNING: The door will move! WARNING: The belt will move!
	0	Hopper Kilograms
	0	Hectares
	1000	Target Rate kg/ha Tap to change rates, if you entered more than one Fixe Rate
	0	Actual Live Rate kg/ha
	0	Spinner Speed RPM
	✓	Wifi Connected to Controller

• Alerts will appear if any problems are detected when Spreading is ON

	0.7	
	✓	

- The controller is ready to use
- If the hydraulics are already setup, you can start spreading
- If hydraulics need to be setup, see the Hydraulics Section

Calibrating Products

- 

Current Product

Urea	Name
24	Spread width m
25	Door height mm
811.7	Calibration factor

Use default cal for existing products
Use bulk density for new products

There are 10 products, use the arrows to choose one
Tap any box to edit
Increasing the cal factor will put out less product

Calibration Sample

NEW	Start a new sample
531.2	Amount dispensed kg

Follow these steps to calibrate
More kilograms will be more accurate

- 1 Start a new sample
- 2 Go spreading, or manually run out some product
- 3 Come back to this page, enter the actual kg that went out

Hydraulics

- **IMPORTANT:** Low engine RPM will cause Spinner and Belt issues
- Tractor hydraulic pumps are coupled to the engine (low engine revs = low hydraulic flow)
- Tractor hydraulic specs are taken at high engine RPM (2000RPM or more)
- Auto transmissions that throttle back the engine can cause low flow issues
- Disable engine throttling, set to 1600RPM or more, as required

Setup Hydraulic Spinners

- Spinners are operated manually
- Connect hoses to tractor remote number 1 (or priority remote)
- Connect to standard remotes, Do not use high flow return, Incorrect return will damage the tractor
- If the tractor has hydraulic flow controls
 - Set flow to 50% (adjust this later to set the spinner speed)
 - Set time to continuous
 - On the spreader, set the manual flow control to full open
- If tractor does not have hydraulic flow controls
 - Use the manual flow control valve on the spreader to set your spinner speed

Setup Hydraulic Belt

- Two types of Hydraulic Belt Drives
- PWM Valve has a solenoid valve on the Spreader
- AUTO Hydraulics controls the tractor hydraulic flow (Deere CNH only)

PWM Valve Setup

- Connect hoses to any tractor remote
- Connect to standard remotes, Do not use high flow return, Incorrect return will damage the tractor
- Set the tractor hydraulic flow to 50% (**IMPORTANT:** Too much oil will starve the Spinners)
- Set time to continuous
- Engage the remote before you start spreading

Quick Manual Test

- Engage the remote
- On the iPad go to MACHINE > CHECKS > BELT and send a Manual Command of 50
- Tap Cancel when done

AUTO Hydraulics Setup – DEERE Tractors

- Connect the AUTO Hydraulics cable (WARNING: key and battery isolator must be off)
- Connect the hoses to tractor remote number 3
- Set the hydraulic flow to 70%
- Push remote 3 forward slowly, belt must turn correctly (swap hoses if it turns backwards)

AUTO
CONNECTOR

- Check the tractor hydraulic display shows AUTO below remote number 3

If AUTO is missing

- Turn tractor off, kill battery isolator
- Unplug the auto hydraulics connector at the front of the spreader
- Start the tractor
- Move remote lever 3 forward for 5 seconds
- Turn tractor off, kill battery isolator
- Plug in the auto hydraulics connector
- Start the tractor, check the display shows AUTO

If AUTO is crossed out

- Quickly click the lever forward and release it
- The line should disappear
- Don't click too far forward, that will engage float

If AUTO is showing

- The hydraulics will run automatically when you start spreading
- Display will turn yellow when oil is flowing
- The tractor must be moving (this is a tractor safety feature, cannot be changed)

Quick Manual Test

- Drive the tractor slowly
- On the iPad go to MACHINE > CHECKS > BELT and send a Manual Command of 50
- Tap Cancel when done

AUTO Hydraulics Setup – CNH Tractors

- Connect the AUTO Hydraulics cable (WARNING: key and battery isolator must be off)
- Connect the hoses to tractor remote number 3
- Set the hydraulic flow to 70%
- Push remote 3 forward slowly, belt must turn correctly (swap hoses if it turns backwards)

- Check the tractor cornerpost display shows AUTO 1 3
- If not, you need to activate AUTO mode
- Steps may be different for some tractors, please contact your tractor dealer

Key off

Press the PROG button, do not release it

Key on

Wait 5 seconds

Release PROG button

Cornerpost shows CONFIG MENU

Select AUX/HITCH/PTO option from the list

Select EHR from the list (Electronic Hyd Controller)

Select AUX SETUP from the list

Set the SCRPR option to: 2 LASER

Select EXIT

- Press button 3 to put the remote in auto mode

Quick Manual Test

- Drive the tractor slowly
- On the iPad go to MACHINE > CHECKS > BELT and send a Manual Command of 50
- Tap Cancel when done

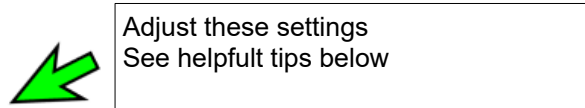

Fine Tune Hydraulic Belt

- All tractors require some fine tuning
- Changing products may also require some fine tuning
- In the iPad app, Tap MACHINE > SETUP

Hydraulic Drive

80	Valve jump start 1 to 100
30	Valve speed 1 to 100
60	Valve damping 1 to 100
20	Green zone 1 to 100

Valve Jump Start - Increase this to make the belt start up quicker

Valve Speed - How fast the valve reacts to rate/speed changes

Valve Damping - Increase this to dampen the valve when it's close the target rate

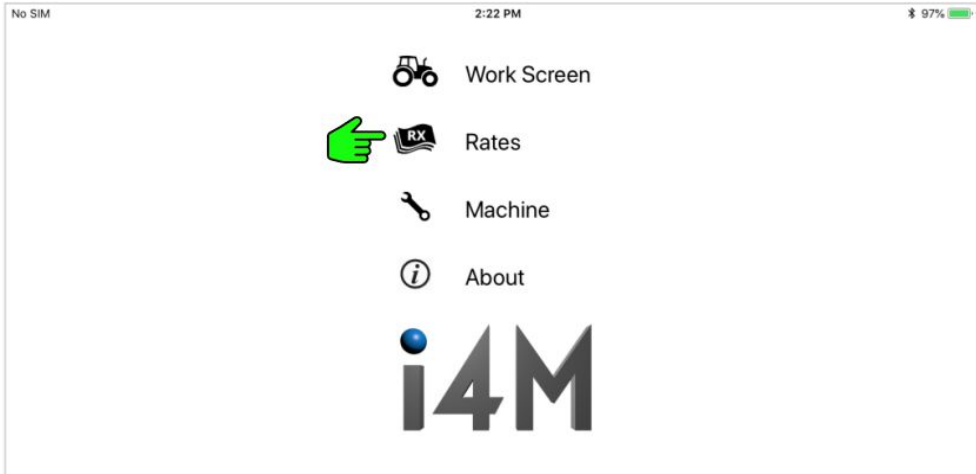

Green Zone - The area close to the target where the valve stops adjusting

Helpful Tips

- Valve Jump Start
 - Used when you tap Spreading ON
 - Increase this if it takes too long for the belt to start turning
 - Decrease this if it jumps to a high rate, then slows down to the correct rate
- Valve Speed
 - The valve adjusts to match your speed and rate
 - A large number will make large adjustments to the valve, too big will make the rate jump up and down
 - A small number will make small adjustments to the valve, too small will take a long time to reach the rate
 - Increase this if it is very slow to reach the desired rate
 - Decrease this if the rate is hunting up and down, also increase the Valve Damping
- Valve Damping
 - When it's close to the desired rate, the adjustments are dampened (they are very gentle)
 - A large number will dampen more, if it's too large the valve won't adjust
 - Increase this if the rate is hunting up and down, also decrease the Valve Speed
- Green Zone
 - When the rate is in the green zone, the valve will stop adjusting
 - If the number is too large, it will stop before it reaches the target
 - If it's too small, it will never stop adjusting
 - Increase this if the rate adjust ok but overshoots the desired rate
 - Decrease this if the rate stops adjusting before it reaches the desired rate

Prescription Maps

- Go to the app Main Menu

- Login with your i4M username and password

- Download your maps
- Select the map you want to use

- Go to Work Screen, your map will be loaded
