i4M

Machine Update

Foreward
This is a basic guide for i4M Machine Controller updates only. This guide provides supplimentary information only.
Please see other relevant documents for Machine Operation.

Overview – Two Easy Steps
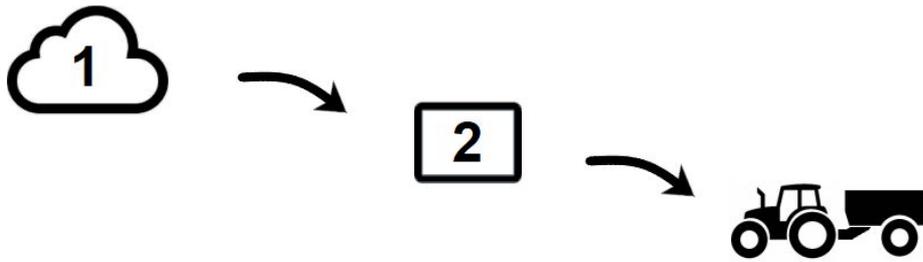

1 - Download the updates from the cloud
2 - Connect the tablet to the Machine Wifi and send the updates

Notes and Features
  • You only need internet to download the update files, it's not needed to update the machine
  • You can download the files anytime, and use them to update the machine later on
  • You can update multiple machines, using the same update files
  • The update files remain on the tablet until you want to delete them
  • You can update the machine to newer versions or backdate it to older versions of software

Getting Started
  • The Machine Update App is available on request – for essential updates or repairs only
  • Some machine devices cannot be updated
  • First check if your device can be updated – using the Update App
  • Connect to the Machine Wifi
  • Open the Update App, tap the menus below

Tap to confirm Wifi is connected

Tap to check the device can receive updates

Downloading Updates
  • Connect the tablet Wifi to an internet connection, tap the menus below

Tap the update that you want to download

Updating the Machine
  • Do not turn off the machine or interrupt the tablet during the update
  • Connect the tablet to the Machine Wifi hotspot
  • If the i4M device reboots, tap 'Check Wifi is Connected', turn Wifi OFF then back ON (force it to connect)
